Correction and Update: Manual Error Review

A visual review was performed on the error-heavy test image. Ten error records from this image were examined alongside the actual annotations and model predictions.

Error Type	Reviewed Records
Wrong Class	2
False Positive	4
False Negative	4
Total	10

Possible explanations include class confusion, unmatched detections, and missed objects. These are potential explanations; the exact causes were not independently established.

Proposed Improvements

• Increase and balance the training dataset.

• Improve bounding-box and class-label annotation quality.

• Tune training and inference settings using validation data.
